Longwall South 2A mining update

Tahmoor Coking Coal commenced mining of Longwall South 2A (LW S2A) on Wednesday 2 August 2023 and has since progressed 1331.5m as of 29 January 2024 (see **Figure 1**).

Mining is progressing in a north-westly direction at a rate of approximately 55m per week and is due for completion in March 2024 (timing subject to operations).

The predicted maximum total vertical subsidence for LW S2A is 900mm. Subsidence levels are tracking below predictions with 845mm observed in total to date.

Pre-Mining Inspections for LWs S4A, S5A or S6A

If your property sits within the influence zone of longwalls S4A, S5A or S6A and you are yet to register for a free Pre-Mining Inspection (PMI) and survey marker installation, please contact us at your earliest convenience.

PMIs assist with a smooth claim assessment process should you need to lodge a claim for any damage. Survey markers measure subsidence occurring at individual properties and help quantify movements if impacts are observed. Markers are placed in discrete locations flush to the ground.

Phone Tahmoor Coking Coal on 02 4640 0025 or email tahmoorenquiries@simecghg.com to book.

Wollondilly Beach Bus January 2024

Tahmoor Coking Coal partnered with Wollondilly Shire Council and Picton Bus Lines to provide two bus routes from Bargo and Warragamba down the coast to North Wollongong Beach every Thursday in January.

Beach bound: Liam, Ella and Hugh Fitzgerald on the Beach Bus.

Tahmoor Coking Coal has made this free service possible through ongoing financial support for the past 11 years. The buses ran at capacity during the school holidays, transporting more than 500 Wollondilly residents to and from the beach. Since it's inception in 2014, more than 2500 community members have used the free service.

Tahmoor Coking Coal – Current Mine Plan

Figure 1 highlights the location of Longwall S2A in yellow.

- The blue line (predicted 20mm Subsidence Area) indicates the area predicted to experience subsidence from LW S2A mining.
- The grey shading depicts the previously mined areas, including the recently mined LW S1A.
- The green and blue areas are active subsidence zone where weekly inspections are carried out. Green being 450m behind the longwall face and blue being 150m in front of the longwall face.
